

**Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application.

1 – 7 (Canceled)

8. (currently amended) A device for adjusting the height position of a dishware basket which can be pulled out from the rinsing container of a dishwashing machine, comprising:  
a basket support plate adapted to be arranged on a side wall of the dishware basket formed from horizontally and vertically extending basket struts;  
said support plate being mountable ~~mounted~~ on said basket struts and including rollers mounted thereto;  
said support plate being adjustably mountable ~~adjustably mounted~~ on said dishware basket at different height positions by an adjustment lever;  
said adjustment lever swivelly mounted to said basket support plate and including a handle end located in a recess formed in said basket support plate;  
said adjustment lever including a catch hook arranged on said handle end oriented to the dishware basket interior and located in said recess;  
said adjustment lever and said basket support plate engage automatically when said dishware basket is moved from a lower height position into and upper height position on said horizontally extending basket struts; and  
said adjustment lever and said basket support plate disengage after a handle part on said handle end is actuated in the direction of said dishware basket interior from said horizontally extending basket struts and

said dishware basket moves automatically from said upper height position into said lower height position.

9. (Previously presented) The device according to claim 8, including said adjustment lever coupled to a spring which biases said adjustment lever to swivel back in an opposite direction after said handle part is actuated in a first direction.
10. (Previously presented) The device according to claim 8, including said catch hook having an undercut for adjusting the actuation force.
11. (Previously presented) The device according to claim 8, including said adjustment lever attached with said rollers on said basket support plate.
12. (Previously presented) The device according to claim 8, including said adjustment lever swivel-mounted near the upper edge of said basket support plate in said recess facing a wall of said rinsing container.
13. (Previously presented) The device according to claim 8, including said adjustment lever arranged on the side of said basket support plate.
14. (Previously presented) The device according to claim 8, including said basket support plate provided at its ends with guide elements which at least partially enclose said vertical basket struts of said dishware basket.
15. (currently amended) A device for adjusting the height position of a dishware basket which can be pulled out from the rinsing container of a dishwashing machine, comprising:

a basket support plate adapted to be arranged on a side wall of the dishware basket formed from horizontally and vertically extending basket struts;

said support plate being mountable ~~mounted~~ on said basket struts and including rollers mounted thereto;

said support plate being adjustably mountable ~~adjustably mounted~~ on said dishware basket at different height positions by an adjustment lever;

said adjustment lever swivelly mounted to said basket support plate and including a handle end located in a recess formed in said basket support plate;

said adjustment lever including a catch hook arranged on said handle end oriented to the dishware basket interior and located in said recess;

said adjustment lever and said basket support plate engage automatically when said dishware basket is moved from a lower height position into and upper height position on said horizontally extending basket struts;

said adjustment lever and said basket support plate disengage after a handle part on said handle end is actuated in the direction of said dishware basket interior from said horizontally extending basket struts and said dishware basket moves automatically from said upper height position into said lower height position;

said adjustment lever coupled to a spring which biases said adjustment lever to swivel back in an opposite direction after said handle part is actuated in a first direction;

said adjustment lever attached with said rollers on said basket support plate and said adjustment lever swivel-mounted near the upper edge of said basket support plate in said recess facing a wall of said rinsing container; and

said adjustment lever arranged on the side of said basket support plate.

16. (Previously presented) The device according to claim 15, including said catch hook having an undercut for adjusting the actuation force.
17. (Previously presented) The device according to claim 15, including said basket support plate provided at its ends with guide elements which at least partially enclose said vertical basket struts of said dishware basket.
18. (New) A device for adjusting the height position of a dishware basket of a dishwashing machine having a rinsing container and a dishware basket having side walls formed from vertically extending basket struts and at least one pair of horizontally extending struts at a vertical spacing from one another, the dishware basket of the dishwashing machine being extendable from, and retractable into, the rinsing container of the dishwashing machine, the device for adjusting the height position of a dishware basket of a dishwashing machine comprising:
  - a basket support plate adapted to be mounted on a side wall of the dishware basket, said basket support plate including rollers mounted thereto and having a recess;
  - an adjustment lever for adjustably mounting said basket support plate on said dishware basket at selectable different heights, said adjustment lever including a handle end located in said recess formed in said basket support plate;
  - means for movably mounting said adjustment lever to said basket support plate for movement of said adjustment lever relative to said basket support plate in a first direction from said basket support plate toward the interior of the dishware basket and in a direction opposite to said first direction;
  - a catch hook arranged on said handle end of said adjustment lever and located in said recess of said basket support plate so as to be oriented to the dishware basket interior when said basket support plate is mounted on a side wall of the dishware basket; and

means for biasing said adjustment lever to move in said opposite direction from the interior of the dishware basket toward said basket support plate, said biasing means normally maintaining said handle end of said adjustment lever in a non-actuated disposition in which said catch hook extends into the path of movement of the dishwasher basket such that, when the dishware basket is moved from a lower height position into an upper height position, said catch hook on said handle end of said adjustment lever automatically engages one of the horizontally extending basket struts of the dishwasher basket as the dishware basket completes its movement from the lower height position into the upper height position and actuation movement of said handle end of said adjustment lever in said first direction from said basket support plate toward the interior of the dishware basket against the bias of said biasing means effects disengagement of said basket support plate from the dishware basket, whereupon the dishware basket is free to move automatically under the action of gravity from the upper height position into the lower height position.

19. (New) The device for adjusting the height position of a dishware basket of a dishwashing machine according to claim 18, wherein said biasing means includes a spring coupled to said adjustment lever, said spring biasing said adjustment lever to swivel back in said opposite direction after said handle part of said adjustment lever is actuated in said first direction.
20. (New) The device for adjusting the height position of a dishware basket of a dishwashing machine according to claim 18, wherein said catch hook has an undercut for adjusting the actuation force.

21. (New) The device for adjusting the height position of a dishware basket of a dishwashing machine according to claim 18, wherein said adjustment lever is attached with said rollers on said basket support plate.
22. (New) The device The device for adjusting the height position of a dishware basket of a dishwashing machine according to claim 18, wherein said means for movably mounting said adjustment lever to said basket support plate includes means for swivel mounting said adjustment lever near an upper edge of said basket support plate in said recess.
